

Class Components

Class-based components have access to a **state** which dictates the current behavior and appearance of the component

React Hooks

Hooks are a new addition in **React 16.8**. They let you use state and other React features without writing a class.

Props is short for properties and they are used to pass data between React components.

Homework

1. Install MUI library
2. Create UI using Input, Buttons, List
3. Everything to components (component for Forms, for Item, For the whole project)
4. `useState ()`, `onChange`, `OnClick`, `onSubmit`,
`e.target.value`
